Professional Summary

Full-Stack Website & Application Developer with a strong background in building dynamic, responsive web applications using Laravel, Tailwind CSS, Alpine.js, React, Docker, and MySQL. Proven ability to design and implement user-friendly interfaces, streamline backend operations, and deliver high-quality solutions tailored to client needs.

Experience

Brooks Gym Website — Contract Developer

Self-Employed | December 2024 - Present

Designed and launched a modern gym website using Laravel, Tailwind CSS, WordPress, JavaScript, and Docker. Built with a flexible frontend and client-friendly backend.

- Created multi-level membership options with strong CTAs
- Built SEO-optimised, visually consistent pages
- Designed scalable store space for future e-commerce
- Implemented mobile-first responsive design and secure forms
- Managed dev environment and deployment with Docker
- Completed the project solo, from planning to launch, boosting lead generation and client satisfaction

Freelance Web Developer

Self-Employed | August 2024 - Present

Built a user-friendly auction site to promote events and improve internal workflows using Laravel, Tailwind CSS, Alpine.js, JavaScript, MySQL, and Docker.

- Interactive event calendar
- Backend tool to bulk-create 800+ item cards in under 5 clicks
- Auto-updating public item listing
- Responsive, SEO-optimised design
- Led the entire project from planning to deployment
- Final version available on GitHub (client paused before launch)

Projects

[Brooks Gym – Outdoor Functional Fitness](#)

Designed a clean, modern website for a local gym focused on visual branding, service pages, and lead conversion. Includes SEO-optimised pages, contact forms, and mobile responsiveness.

[Sheriff Auctions Website](#)

Created a streamlined auction platform with automated item card generation and a calendar-based event preview system. Built to improve content management and reduce manual work.

[Symfony-MicroBlog](#)

Created a micro-blogging platform with user authentication, post creation, and comment functionality (Symfony).
